Enoro's Meter Data Management solution takes E.ON's operational efficiency to the next level

Enoro is pleased to announce that E.ON Elnät Sverige AB has gone live with Enoro's MDM/Smart Grid solution, GENERIS. E.ON is the largest utility in Sweden and has over one million end customers. The solution monitors and maintains E.ON's meter data management and balance settlement processes using the most advanced and future-proof technology available on the market today.

E.ON has replaced its old meter data management (MDM) application with Enoro's scalable GENERIS MDM/Smart Grid solution, which caters to both E.ON's current and future needs. The solution enables E.ON to benefit from quality assured customer data and to utilize this data to optimize its business performance. The current go-live covers the first phase of the project and will then continue with the additional phases to activate further smart grid functionalities for production use.

"Enoro is extremely proud to be chosen as the preferred software vendor for E.ON in Sweden. This has given us a unique opportunity to be the front-runner in the European utility market, helping our customers to optimize complex business processes and taking the operational efficiency to the next level", says Kary Warnerman, Senior Vice President of Enoro Sweden.

"The delivery of the Generis system from Enoro is a great step forward and an important platform for our future handling of smart metering data", says Charlotta Jönsson, head of Business Management within E.ON Elnät Sverige AB.

About Enoro

Enoro helps utility enterprises become more profitable and develop sustainable and agile business models. Enoro's end-to-end solutions turn the challenges of reduced consumption, deregulation and rapidly increasing volumes of data into opportunities by applying intelligence to business decisions. Our software solutions specifically focus on leveraging the value to be found in the explosion of smart meter data and in enabling commercial market processes. With over 20 years' experience in delivering energy data management systems to more than 400 customers across Europe, we have come to understand the market and how current changes will affect the utilities trade in the future. Our mission is to ensure that our customers are ready for these new challenges and are positioned to benefit from the opportunities to come.
